

2511 siabite

The ceramic abrasive for power files and contact belts

2511 siabite – Specialist for power files

These grinding belts have been specially designed for applications on a power file. Efficient sanding of high-alloy steel and hard-to-grind metal is guaranteed thanks to the self-sharpening process of the ceramic grit.

Product profile

Material:	High-alloy steel, hard-to-grind metal
Grit:	Ceramic alumina
Grit range:	36 to 80
Backing:	Y-wt cloth
Special coating:	Cooling additive
Coating:	Closed

Advantages

- More efficiency thanks to the highest performance
- Less machine interruptions thanks to long lifetime
- Less strain on the workpiece thanks to the highest aggressiveness
- Cool cut thanks to heat-reducing additive
- Improved flexibility for power files thanks to special flexing

Applications

- Welding preparation
- Stock removal
- Surface grinding
- Deburring
- Blending

Application

Highly recommended
Power file

Recommended
Contact belt grinding

Recommended
Contact wide belt grinding

Recommended
Long belt grinding

Possible
Centerless grinding
